Peter Toth  
DigiPen Institute of Technology  
Redmond, Washington

Dear Peter Toth,

I am writing to apply for the Student TA position for MAT 200 for Fall 2026. I am currently pursuing a B.S. in Real-Time Interactive Simulation at DigiPen Institute of Technology, with a cumulative GPA of 3.96. I have always enjoyed mathematics and problem solving, and throughout my time at DigiPen, I have frequently helped classmates with mathematics and programming coursework. I would like the opportunity to use that experience to support students in MAT 200.

Although I completed MAT 230 (Vector Calculus II) rather than MAT 200, MAT 230 fulfills the MAT 200 requirement in my degree progress, and I received an A in the course. DigiPen's course catalog also states that credit may be received for only one of MAT 200 and MAT 230. I previously completed MAT 180 (Vector Calculus I) with an A as well, and I have earned A grades in all of the mathematics courses listed on my resume. While I understand that I did not take MAT 200 itself, I believe my coursework and academic record have prepared me well to assist students with its course material.

Helping other students has also been a regular part of my experience at DigiPen. Classmates often approach me with questions about mathematics or programming, and I try to help them understand the reasoning and problem-solving process rather than simply giving them an answer. I have learned to adjust my explanations depending on where someone is having difficulty and to work through problems step by step. My experience as a producer and team lead on DigiPen game projects has further strengthened these skills by requiring me to explain technical concepts, support teammates through difficult problems, coordinate different perspectives, and maintain constructive communication within a team.

I would be excited to contribute these skills as a MAT 200 TA and to help students build confidence and understanding in calculus. I am prepared to assist with grading, labs or office hours, and other responsibilities required by the position, and I would take those responsibilities seriously and consistently. Thank you for considering my application. I would appreciate the opportunity to discuss my qualifications further.

Sincerely,

Taekyung (Jean) Ho
