Dear Apple Hiring Team,

I am excited to apply for the Applied Data Solutions Program Internship for Summer 2027. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have developed a strong foundation in C++, software architecture, data structures, algorithms, and systems programming. I am particularly interested in this program because it brings together software engineering, data, and applied AI to build production systems that solve real-world problems.

As the Producer and Engine/Graphics Engineer for *Dragonic Tactics*, I worked extensively with a custom C++ game engine, refactoring its rendering system to use OpenGL directly and developing features such as batch rendering, instanced rendering, and virtual resolution. I also designed communication between engine and gameplay systems using an event-driven architecture while coordinating technical milestones and priorities across a five-person team. This experience strengthened my ability to design maintainable software, debug complex systems, and collaborate across different technical responsibilities.

Previously, as Technical Lead for *10..9..8..*, I helped develop a custom C++ engine using an Entity-Component System and guided technical decisions and project integration. Across these projects, I became increasingly interested not only in building applications, but also in the underlying systems, data flows, and tools that make software reliable and scalable.

The Applied Data Solutions Program is especially appealing to me because of its interdisciplinary focus across software engineering, machine learning, and data science. While my strongest experience today is in C++ and software systems, I am actively expanding toward AI-enabled software and would welcome the opportunity to deepen my experience with data-driven systems, predictive modeling, and applied machine learning in a production environment.

I would be excited to contribute my software engineering foundation, problem-solving skills, and experience working on collaborative technical projects to Apple while continuing to grow in data and applied AI. Thank you for considering my application.

Sincerely,

Taekyung (Jean) Ho
