Dear Epic Games Hiring Team,

I am excited to apply for the Gameplay Programmer Intern (R27420) position at Epic Games. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have developed a strong foundation in C++, game technology, software architecture, and computer graphics. I am especially interested in this role because it combines the areas I have enjoyed most in my projects: solving technical problems in C++, developing game systems, and collaborating with others to turn gameplay ideas into working experiences.

As the Producer and Engine/Graphics Engineer for Dragonic Tactics, a 2D turn-based tactical RPG developed by a five-person team, I worked extensively with a custom C++ game engine. I refactored the engine to integrate OpenGL directly, developed core rendering systems, and helped design communication between engine and gameplay systems using an EventBus. Alongside my engineering responsibilities, I coordinated project milestones and development priorities across the team. This experience taught me how technical systems, gameplay requirements, and team collaboration affect one another throughout development.

Previously, as Technical Lead for 10..9..8.., a dungeon exploration game built around a 10-step movement constraint, I helped develop a custom C++ engine using an Entity Component System and the Singleton pattern while guiding technical decisions and project integration. Working on these projects strengthened both my C++ skills and my interest in the engineering behind interactive experiences. I particularly enjoy understanding how systems fit together, debugging technical problems, and building implementations that other parts of a game can reliably depend on.

I would be excited to bring this foundation to Epic while learning to develop clean, maintainable C++ gameplay code in Unreal Engine. The opportunity to contribute to Fortnite Reload alongside programmers, designers, and artists is especially appealing to me because I want to continue growing as an engineer who can prototype, debug, and refine gameplay systems while collaborating effectively across disciplines.

Thank you for considering my application. I would welcome the opportunity to contribute my C++ and game development experience to Epic Games and continue developing as a gameplay programmer.

Sincerely,
Taekyung (Jean) Ho
