Dear Epic Games Hiring Team,

I am excited to apply for the Tools Programmer Intern (R27410) position at Epic Games. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have developed a strong foundation in C++, game technology, software architecture, and computer graphics. I am particularly interested in this role because I enjoy building the underlying systems and tools that make development more efficient, reliable, and maintainable.

As the Producer and Engine/Graphics Engineer for Dragonic Tactics, a 2D turn-based tactical RPG developed by a five-person team, I worked extensively with a custom C++ game engine. I refactored the engine to integrate OpenGL directly, developed reusable rendering systems, and helped design communication between engine and gameplay systems using an EventBus. Alongside my engineering responsibilities, I coordinated project milestones and development priorities across the team. This experience gave me a strong appreciation for how well-designed underlying systems can improve the workflow of everyone contributing to a project.

Previously, as Technical Lead for 10..9..8.., I helped develop a custom C++ engine using an Entity Component System and the Singleton pattern while guiding technical decisions and integration. Through these projects, I became increasingly interested not only in the final game experience, but also in the infrastructure, workflows, and reusable technology that enable developers to work effectively. I also regularly use AI-assisted coding tools as part of my development workflow and am comfortable evaluating, refining, and integrating their output rather than treating them as a substitute for engineering judgment.

I would be excited to bring my C++ and game-engine background to Epic's Build Operations – Tools team while expanding my experience with developer tooling, testing, automation, and internal workflows. The opportunity to build technology that improves how developers create, test, and deliver Fortnite and Unreal Engine is especially compelling to me.

Thank you for considering my application. I would welcome the opportunity to contribute my engineering experience to Epic Games and continue growing as a tools programmer.

Sincerely,
Taekyung (Jean) Ho
