Dear Toyota Material Handling North America Hiring Team,

I am excited to apply for the Artificial Intelligence Business Transformation Internship at Toyota Material Handling North America. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have developed a strong foundation in C++, software architecture, systems programming, and computer graphics. I am particularly interested in this internship because it combines software development with the practical application of AI to improve workflows, automate processes, and help teams work more effectively.

As the Producer and Engine/Graphics Engineer for *Dragonic Tactics*, a 2D turn-based tactical RPG developed by a five-person team, I worked extensively with a custom C++ game engine. I refactored the engine to integrate OpenGL directly, developed core rendering systems, and helped design communication between engine and gameplay systems using an EventBus. Alongside my engineering responsibilities, I coordinated project milestones and development priorities across the team. This experience taught me how to analyze technical problems, design maintainable systems, and collaborate with people working on different parts of a larger project.

Previously, as Technical Lead for *10..9..8..*, I helped develop a custom C++ engine while guiding technical decisions and project integration. Across these projects, I became especially interested in building tools and systems that reduce repetitive work, improve development workflows, and make complex information easier to organize and use. I have also incorporated AI-assisted development tools into my own workflow and have become increasingly interested in how generative and agentic AI can be applied responsibly to software development and broader business processes.

I would be excited to bring my software engineering background, problem-solving skills, and willingness to learn to Toyota Material Handling. The opportunity to prototype AI-enabled solutions, explore process automation, and collaborate with teams across IT, Finance, Supply Chain, and other business areas is especially appealing to me. I am eager to deepen my understanding of practical AI applications while contributing to projects that create measurable improvements in how people work.

Thank you for considering my application. I would welcome the opportunity to contribute my technical background and collaborative experience to Toyota Material Handling North America while continuing to grow as a software engineer working with AI-enabled systems.

Sincerely,

Taekyung (Jean) Ho
