

Dear Dell Technologies Hiring Team,

I am excited to apply for the CSG Software Engineering Undergraduate Intern position at Dell Technologies. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have built a strong foundation in C++, software architecture, systems programming, computer graphics, data structures, and collaborative software development.

Through my academic and team projects, I have gained hands-on experience designing, implementing, debugging, and improving complex software systems. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ game engine by removing an existing rendering dependency and integrating OpenGL directly. I also developed parts of a custom rendering pipeline and worked on communication between engine systems, which strengthened my understanding of performance, maintainability, testing, and software integration.

I have also served in technical leadership roles, helping coordinate development priorities, resolve integration issues, and support teammates across different parts of a project. These experiences taught me how to work effectively within a development lifecycle while balancing technical requirements, team communication, and product goals.

I am particularly interested in Dell because this internship offers the opportunity to contribute across the software development lifecycle, from design and implementation to integration, validation, and debugging. I am especially interested in applying my C++ and systems-oriented background to software that runs across modern computing platforms while learning from engineers working on large-scale commercial products.

Thank you for your time and consideration. I would welcome the opportunity to contribute my technical foundation, problem-solving skills, and curiosity to Dell Technologies while continuing to grow as a software engineer.

Sincerely,

Taekyung (Jean) Ho
