

Dear DoorDash Hiring Team,

I am excited to apply for the Software Engineer Intern position for Summer 2027. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have built a strong foundation in C++, algorithms and data structures, object-oriented programming, software architecture, and systems-oriented development.

Through my academic and team projects, I have gained hands-on experience designing, implementing, and improving software systems. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ engine by removing an external rendering dependency and integrating OpenGL directly. I also designed inter-system communication using an EventBus to reduce coupling between engine and gameplay systems and developed a real-time rendering pipeline supporting batch and instanced rendering. These experiences strengthened my understanding of performance, maintainability, system integration, and architectural trade-offs.

I have also served as a Technical Lead and Producer on team projects, where I helped coordinate development priorities, resolve integration issues, and support teammates working across different parts of a system. These roles taught me how to take ownership of technical problems while communicating clearly and collaborating toward a shared product goal.

What particularly interests me about DoorDash is the opportunity to work on software where product engineering and large-scale systems directly affect real users. I am drawn to the challenge of building reliable technology for a platform that connects consumers, merchants, and Dashers, and I would be excited to contribute my systems-oriented background while learning how production software is developed, shipped, and operated at DoorDash.

Thank you for your time and consideration. I would welcome the opportunity to contribute my technical foundation, problem-solving skills, and curiosity to DoorDash while continuing to grow as a software engineer.

Sincerely,
Taekyung (Jean) Ho
