

Dear Hearst / First Databank Hiring Team,

I am excited to apply for the Software Engineering Intern position at First Databank. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have built a strong foundation in C++, data structures, object-oriented programming, software architecture, debugging, and systems-oriented development.

Through my academic and team projects, I have gained hands-on experience designing, implementing, and improving complex software systems. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ engine by removing an existing rendering dependency and integrating OpenGL directly. I also worked on reusable engine systems and communication between software components, which strengthened my ability to debug complex problems, reason about maintainability, and understand how different parts of a system interact.

I have also taken on technical leadership responsibilities, helping coordinate development priorities, resolve integration issues, and support teammates across different areas of a project. These experiences taught me how to communicate technical decisions clearly, collaborate effectively, and adapt to unfamiliar problems and technologies.

I am particularly interested in First Databank because this internship offers exposure to a wide range of software engineering areas, including web and API development, cloud infrastructure, databases, debugging, testing, and data-related applications. I am interested in becoming a product-oriented software engineer, and I would be excited to apply my systems background while expanding my experience across different layers of production software.

Thank you for your time and consideration. I would welcome the opportunity to contribute my technical foundation, problem-solving skills, and curiosity to First Databank while continuing to grow as a software engineer.

Sincerely,
Taekyung (Jean) Ho
