Dear Gallup Hiring Team,

I am excited to apply for the Software Engineer Intern — Summer 2027 position at Gallup. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have developed a strong foundation in C++, software architecture, computer graphics, data structures, and systems programming.

Through my academic and team projects, I have gained experience building and improving software systems from the ground up. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ game engine by removing its existing rendering dependency and integrating OpenGL directly. I also developed a 2D rendering pipeline supporting texture mapping, batch rendering, instanced rendering, and resolution-independent rendering. This work required me to understand unfamiliar systems, debug complex problems, and make design decisions that balanced performance, maintainability, and integration with other parts of the project.

I have also served as a Technical Lead and Producer on team projects, where I coordinated development priorities, supported integration across different systems, and worked closely with teammates to solve technical problems. These experiences have taught me that I enjoy not only writing code, but also understanding how software fits together and collaborating with others to improve a product.

I am particularly interested in Gallup's internship because it offers the opportunity to contribute to real software while learning from experienced engineers. I would be excited to bring my C++ background, problem-solving mindset, and willingness to learn new technologies to Gallup while continuing to grow as a software engineer.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my background and interests could contribute to Gallup's engineering team.

Sincerely,

Taekyung (Jean) Ho
