

Dear Garmin Hiring Team,

I am excited to apply for the Software Engineer Intern position for Summer 2027. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have developed a strong foundation in C++, data structures, object-oriented programming, software architecture, debugging, and systems-oriented development.

Through my academic and team projects, I have gained hands-on experience building and maintaining software in C++. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ game engine by removing an existing rendering dependency and integrating OpenGL directly. I also worked on reusable engine systems, rendering architecture, and communication between components, which strengthened my ability to debug complex systems, reason about software structure, and improve maintainability.

I have also served in technical leadership roles, where I helped coordinate development priorities, resolve integration issues, and support teammates across different areas of a project. These experiences taught me how to communicate technical decisions clearly, work effectively in a team environment, and contribute to software throughout multiple stages of development and testing.

I am particularly interested in Garmin because this internship emphasizes C/C++ development, debugging, testing, software quality, and real product development. I am excited by the opportunity to apply my experience with C++ and systems programming while learning how production software is developed, tested, released, and maintained for products used by real customers.

Thank you for your time and consideration. I would welcome the opportunity to contribute my technical foundation, problem-solving skills, and enthusiasm for software engineering to Garmin.

Sincerely,
Taekyung (Jean) Ho
