

Dear Hudl Hiring Team,

I am excited to apply for the Software Engineering Intern position at Hudl. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have developed a strong foundation in C++, data structures, object-oriented programming, software architecture, debugging, and systems-oriented development.

Through my academic and team projects, I have gained hands-on experience designing, implementing, and maintaining complex software systems. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ engine by removing an existing rendering dependency and integrating OpenGL directly. I also worked on reusable engine systems and communication between software components, which strengthened my understanding of maintainability, performance, debugging, and system integration.

I have also served in technical leadership roles, where I helped coordinate development priorities, resolve integration issues, and support teammates working across different parts of a project. These experiences taught me how to communicate technical decisions clearly, collaborate effectively, and think about software not only as individual features, but as a complete system that needs to remain reliable and maintainable.

What particularly interests me about Hudl is the opportunity to build software that directly helps people perform their work better. I am drawn to products where engineering decisions have a visible impact on real users, and Hudl's combination of technology, sports, and collaborative product development makes this internship especially appealing to me. I would be excited to apply my systems-oriented background while learning from engineers working on production software at scale.

Thank you for your time and consideration. I would welcome the opportunity to contribute my problem-solving skills, technical foundation, and curiosity to Hudl while continuing to grow as a software engineer.

Sincerely,
Taekyung (Jean) Ho
