

Dear ID.me Hiring Team,

I am excited to apply for the Summer 2027 Software Development Engineer Intern position at ID.me. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have built a strong foundation in C++, software architecture, systems programming, data structures, and collaborative software development.

Through my academic and team projects, I have gained hands-on experience designing, implementing, debugging, and improving complex software systems. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ game engine by removing an existing rendering dependency and integrating OpenGL directly. I also worked on reusable engine systems, rendering architecture, and communication between components, which strengthened my understanding of maintainability, performance, debugging, and system integration.

I have also served in technical leadership roles, helping coordinate development priorities, resolve integration issues, and support teammates across different parts of a project. These experiences taught me how to communicate technical decisions clearly, collaborate across a team, and approach software problems with both implementation details and overall system design in mind.

I am particularly interested in ID.me because of the opportunity to work on reliable, scalable software that supports real users at a large scale. I am especially interested in backend systems, APIs, distributed services, and cloud-based software, and I would be excited to apply my systems-oriented background while expanding my experience with production software engineering practices.

Thank you for your time and consideration. I would welcome the opportunity to contribute my technical foundation, problem-solving skills, and curiosity to ID.me while continuing to grow as a software engineer.

Sincerely,

Taekyung (Jean) Ho
