

Dear OnePay Hiring Team,

I am excited to apply for the Software Engineer Intern position at OnePay. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have built a strong foundation in C++, software architecture, systems programming, data structures, and collaborative software development.

Through my academic and team projects, I have gained hands-on experience designing, debugging, and improving software systems. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ game engine by removing an existing rendering dependency and integrating OpenGL directly. I also developed parts of a 2D rendering pipeline and worked on system architecture and communication between engine components. These experiences strengthened my ability to understand unfamiliar codebases, solve technical problems, and balance maintainability, performance, and integration.

I have also served as a Technical Lead and Producer on team projects, where I helped coordinate development priorities, resolve integration issues, and support teammates across different parts of the software stack. I enjoy working on problems where I can combine strong technical fundamentals with practical product development.

I am particularly interested in OnePay because of the opportunity to contribute to software that directly supports a real financial product and its users. I would be excited to bring my C++ background, systems thinking, and problem-solving experience to your engineering team while continuing to grow as a software engineer in a production environment.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my background and interests could contribute to OnePay.

Sincerely,

Taekyung (Jean) Ho
