

Dear Hiring Team,

I am excited to apply for the Software Engineering Intern position for Summer 2027. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have developed a strong foundation in C++, software architecture, systems programming, computer graphics, data structures, and collaborative software development.

Through my academic and team projects, I have gained hands-on experience designing, implementing, debugging, and improving complex software systems. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ game engine by removing an existing rendering dependency and integrating OpenGL directly. I also worked on rendering systems, software architecture, and communication between engine components, which strengthened my understanding of maintainability, performance, testing, and system integration.

I have also served in technical leadership roles where I helped coordinate development priorities, resolve integration issues, and support teammates across different areas of a project. These experiences taught me how to work effectively within a team, communicate technical decisions clearly, and approach problems with both implementation details and overall system design in mind.

I am particularly interested in this internship because it offers the opportunity to contribute to real software projects, improve existing systems, and work closely with experienced engineers. I would be excited to apply my C++ and systems-oriented background while continuing to grow in software development, debugging, testing, and production engineering practices.

Thank you for your time and consideration. I would welcome the opportunity to contribute my technical foundation, problem-solving skills, and curiosity to your engineering team.

Sincerely,

Taekyung (Jean) Ho
