

Dear Semgrep Hiring Team,

I am excited to apply for the Software Engineer Intern, Cloud Platform position at Semgrep. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have built a strong foundation in software engineering, C++, systems programming, data structures, computer graphics, and collaborative development.

Through my academic and team projects, I have gained hands-on experience designing, implementing, debugging, and improving complex software systems. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ game engine by removing an existing rendering dependency and integrating OpenGL directly. I also worked on reusable engine systems, rendering architecture, and communication between components, which strengthened my understanding of maintainability, system design, debugging, and integration.

I have also served in technical leadership roles, coordinating development priorities, resolving integration issues, and working closely with teammates across different parts of a project. These experiences taught me how to communicate technical decisions clearly, review tradeoffs, and contribute effectively in collaborative engineering environments.

I am particularly interested in Semgrep because the role combines software engineering with developer tooling and security. I am drawn to tools that improve the way engineers build and maintain software, especially when they need to be reliable, scalable, and easy to integrate into existing workflows. Although much of my current experience has been in C++ and systems-oriented development, I am eager to expand into Python, TypeScript, React, and PostgreSQL while contributing to production-facing tools used by real engineering teams.

I would be excited to bring my systems mindset, problem-solving skills, and willingness to learn to Semgrep while gaining experience building developer-focused products in a fast-moving engineering environment.

Thank you for your time and consideration.

Sincerely,

Taekyung (Jean) Ho
