

Dear Terex Hiring Team,

I am excited to apply for the Software Engineering Intern position for Summer 2027. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have built a strong foundation in C++, data structures, object-oriented programming, software architecture, debugging, and systems-oriented development.

Through my academic and team projects, I have gained hands-on experience designing, implementing, and improving complex software systems. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ game engine by removing an existing rendering dependency and integrating OpenGL directly. I also worked on reusable engine systems, rendering architecture, and communication between software components, which strengthened my ability to reason about maintainability, performance, debugging, and system integration.

I have also served in technical leadership roles, helping coordinate development priorities, resolve integration issues, and support teammates across different parts of a project. These experiences taught me how to communicate technical decisions clearly, collaborate effectively, and approach engineering problems with both implementation details and the larger system in mind.

I am particularly interested in Terex because this internship offers the opportunity to work on real engineering products and contribute to software that supports practical, large-scale systems. I am motivated by software that has a clear connection to real-world users and operations, and I would be excited to apply my C++ and systems background while gaining experience with production development practices, testing, and cross-functional engineering.

Thank you for your time and consideration. I would welcome the opportunity to contribute my technical foundation, problem-solving skills, and curiosity to Terex while continuing to grow as a software engineer.

Sincerely,
Taekyung (Jean) Ho
