

Dear Vercel Hiring Team,

I am excited to apply for the Software Engineering Intern position for Summer 2027. I am currently pursuing a B.S. in Computer Science in Real-Time Interactive Simulation at DigiPen Institute of Technology, where I have developed a strong foundation in C++, data structures, software architecture, debugging, and systems-oriented development.

Through my academic and team projects, I have gained hands-on experience designing and improving software systems. As an Engine and Graphics Engineer on a five-person team, I refactored a custom C++ engine by removing an external rendering dependency and integrating OpenGL directly. I also designed inter-system communication using an EventBus to reduce coupling between engine and gameplay systems, which strengthened my understanding of modularity, maintainability, and architectural trade-offs.

I have also served in technical leadership roles, helping coordinate development priorities, resolve integration issues, and support teammates working across different parts of a project. These experiences taught me how to take ownership of technical problems, communicate decisions clearly, and work collaboratively to move a project from design through implementation and integration.

What interests me most about Vercel is its strong product engineering culture and the opportunity to work on tools that directly improve how developers build and ship software. I am especially drawn to environments where engineers can own meaningful projects, iterate quickly, and see the impact of their work on real users. I would be excited to bring my systems-oriented background to Vercel while expanding my experience in modern product and web software engineering.

Thank you for your time and consideration. I would welcome the opportunity to contribute my problem-solving skills, technical foundation, and curiosity to Vercel while continuing to grow as a software engineer.

Sincerely,
Taekyung (Jean) Ho
